

Product Spec: TrailLight Handheld Lantern

Overview

The TrailLight is a compact rechargeable lantern designed for camping and emergency use. It replaces the aging Beacon 100 model and targets a lower price point while improving battery life.

Key Requirements

- Battery life of at least 20 hours on low brightness
- USB-C charging, full charge in under 3 hours
- Water resistant to IPX4, splash-proof but not submersible
- Weight under 200 grams including battery

Target Audience

Weekend campers and households assembling a home emergency kit. Pricing should stay under 25 dollars at retail to compete with the current market leader.

Open Questions

The hardware team still needs to confirm whether the collapsible hook design survives a one meter drop test. A decision is expected before the next design review.
